A sorok közötti különbség szignifikáns, megérte!

Az előnye ennek a vizsgálatnak, hogy nem az illesztett egyenesekhez képest nézi az eltéréseket, tehát azok hibája nem a reziduumba (az Error sorba) kerül.

N=40

A guinea-pig antiserum is assayed against a standard serum (0.4 IU/ml) using an enzyme-linked immunosorbent assay technique (ELISA). 10 two-fold dilutions of each serum were applied on a 96-well ELISA plate. Each dilution was applied twice.

Parallel\_példák

103

$$y = \delta + \frac{\alpha - \delta}{1 + e^{-\beta(x-\gamma)}} = \delta + \frac{\alpha - \delta}{1 + \left(\frac{dose}{EC_{50}}\right)^{-\beta}}$$

$$y = a^x = e^{bx} \quad a > 0, b = \ln a$$

lépések:

variancia konstans?

normális eloszlás?

jó-e a függvény illeszkedése?

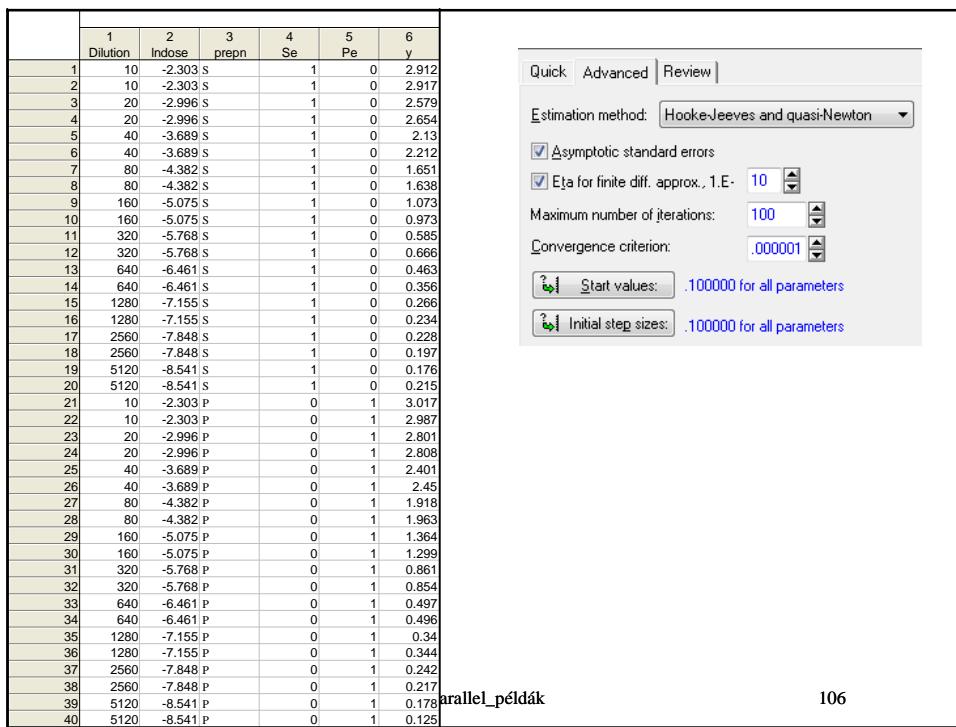

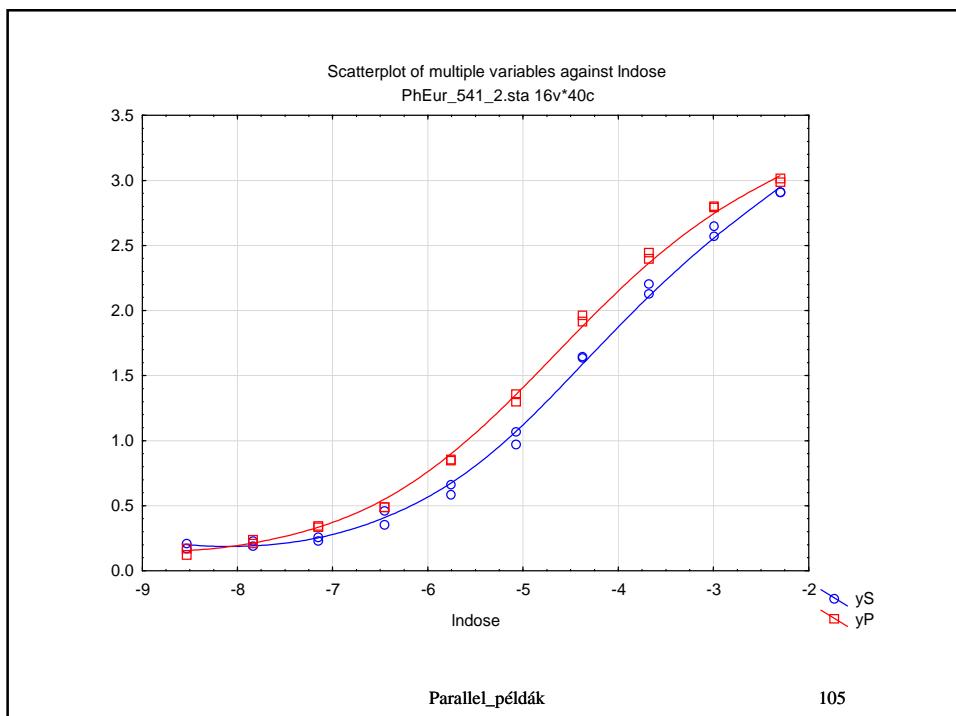

párhuzamosak-e a görbék?

RP

konf. intervallum

Parallel\_példák
